

The 2024-2025 FIRST LEGO Submerged Season is here!

FIRST LEGO League (FLL) is a global robotics competition that introduces students aged 6-16 to the exciting world of science, technology, engineering, and mathematics. The program challenges teams to design, build, and program autonomous robots using LEGO kits, which then compete in a series of missions on a themed playing field.

In addition to robot games, FLL emphasizes innovation and teamwork. Teams are tasked with researching a real-world problem related to the season's theme and developing an innovative solution, which they present in an Innovation Project. Throughout the competition, teams are encouraged to embody the core values of FLL, which include discovery, innovation, impact, inclusion, teamwork, and fun.

FLL is divided into different age-appropriate divisions: The **Explore League** for younger students and the **Challenge League** for older participants. We are thrilled to enhance our program with the addition of more coaches, who will help bring out the best in our teams.

Applications are available in the STEM Lab or Front Office. You may also print the applications with the links below.

[Challenge Team Applications](#) are due by September 19th.

[Explored Team Applications](#) are due by October 4th.
